13th August, 2025

Dear Observer Relations Team,

Thanks for your mail of 5th August, 2025 @ 18:33 hrs.

First, thanks for the call for input for way forward.

Our suggestion relates to Food Security, Food productivity, food for hungry millions.

We suggest the following:

The experts may first assess current status and future projection on what will be likely situation and what can be done to meet the challenges by international cooperation under umbrella of UNFCCC.

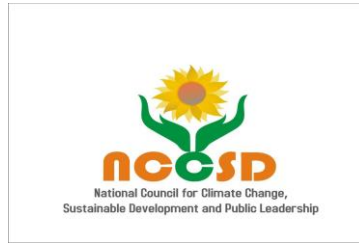

In our opinion following is current status:

1. Adverse intense weather events are on increasing with increased temperature.
This will continue with further rapid rate and affect every one, everywhere.
But most vulnerable are local - rural areas where livelihoods are under danger.
Maximum impact is on agriculture sector - farming, livestock and fisheries.
Again, most vulnerable are developing countries and Ocean Areas.
2. This will pose serious challenges:
 - a. Migration within and outside
 - b. Social conflict and riots for food
 - c. Serious decline in productivity of agriculture, livestock and fisheries.
3. With increasing urbanisation, demand for food will increase and in years to come not met with.
4. Food for hungry millions will be scarce and results will be massive famine of food and death of people and livestock.

Actually, this has already started happening now in many parts of the World but not noticed or highlighted in UNFCCC deliberations.

Our suggestion is to take a stock of this and work for an action plan.

World has technology and expertise by which it is possible to mitigate situation by international cooperation.

Please acknowledge receipt.

With best wishes.
